SUMMARY

Highly motivated Information Technology student with strong skills in Java, Python, MERN Stack (MongoDB, Express.js, React.js, and Node.js), AI, and IoT development. Solved 500+ coding problems across competitive programming platforms such as LeetCode, GeeksforGeeks, and Codeforces, demonstrating strong problem-solving and algorithmic thinking abilities. Eager to leverage technical expertise and project experience to build impactful and scalable software solutions.

EDUCATION

2024 – 2028	Kongu Engineering College, Erode B.Tech in Information Technology	CGPA: 9.34/10.0 (as of Semester III)
2024	M.S.P. Solai Nadar Memorial Higher Secondary School, Dindigul Higher Secondary (Class XII)	84.6%
2022	M.S.P. Solai Nadar Memorial Higher Secondary School, Dindigul Secondary (Class X)	68.4%

TECHNICAL SKILLS

Languages	Java, Python, C++, C
Web Technologies	React.js, JavaScript, HTML5, CSS3, Node.js, Flask
Databases	MySQL, MongoDB
Tools & Platforms	Git, GitHub, Streamlit, VS Code
Core Concepts	Data Structures and Algorithms, Object-Oriented Programming, DBMS, REST APIs
Specializations	Full-Stack Development, AI Applications, DBMS, IoT Systems

PROJECTS

Restaurant Menu Performance Analysis System [GitHub](#)

Developed a data-driven analytics application using Python, SQL, Pandas, and Streamlit to evaluate restaurant menu performance. Generated insights on sales trends, revenue contribution, item popularity, and category-wise performance through interactive dashboards and visualizations, enabling data-informed business decisions.

Smart Home Energy Monitoring System [GitHub](#)

Built an IoT-based energy management system for real-time monitoring of household electricity consumption. Integrated energy forecasting, daily cost analytics, and remote appliance control through web and mobile dashboards.

Medi Route – Smart Ambulance Traffic Control System [GitHub](#)

Designed a smart emergency response solution using GPS and IoT-enabled traffic signal automation. Created a real-time monitoring dashboard to facilitate green corridors and improve ambulance response times.

Civic Connect – Civic Issue Reporting Platform [GitHub](#)

Developed a full-stack web application using HTML5, CSS, Node.js, and MongoDB for reporting and tracking civic issues. Enabled issue lifecycle management, status updates, and efficient communication between citizens and authorities.

ACHIEVEMENTS

- Ranked among the **Top 5% of students** at Kongu Engineering College based on academic performance during the academic year 2025–26.
- Secured **First Prize** in the **Mini Hackathon (First-Year Exclusive)** and **DevForge (College Level Hackathon)** at Kongu Engineering College for developing the Smart Home Energy Monitoring System.
- Selected as a **Finalist** in the IEEE National-Level Paper Presentation conducted at **NIT Srinagar** for the paper titled “*Smart Energy Management System: Real-Time Monitoring, Billing, and Weather-Aware Predictive Consumption Using IoT and a Web Dashboard*”.
